

## Description of Separate Sheets

**Appendix 4.** The map of Yala Glacier. The elevation attached to contour line is the Z co-ordinate, while that attached to the points is the elevation in meters above sea level. Numbers in the frame are X and Y co-ordinates.

**Appendix 5.** Geomorphological map of the proglacial area of Yala (Dakpatsen) Glacier.

### **Appendix 6.** Topographic names in Langtang Valley

The names of rivers, mountains and kalkas (summer villages) were gathered from Langtang villagers, during the stay in Langtang Valley. This work was largely helped by Mrs. Ayako Sadakane, Institute of Human Sciences, Kyoto University, who stayed in the Langtang Village occasionally at the same period of our glacier boring works. In this figure, the confirmed topographic names were given. When the local names differ from the names which are generally used in foreign countries, the formers are shown in parentheses.
